The Company:

We design, create and communicate — with our heart and mind and a passion for digital media and technology. We have a solid understanding of the diverse digital market and its requirements and guide our customers on their journey to meet their targets. We use our extensive expertise in the field of internet technology to convert brand needs into real customer relationships. The secret to our success lies in combining strategic and technological skills as well as customer needs and solution strategies. After all, we are a one-stop shop for all customer's services. Only through this approach can we ensure the continual success of customer projects – even with last-minute changes to projects and requirements.

The Company seeking to enrich the growing team with a software developer that has the following.

Your Tasks

As an application developer DevOps you are responsible for the administration and operational support of web system landscapes. In doing so, you are driving forward the automation and optimization of system processes.

- Transfer of new systems into live operation through automated installation and setup of servers, applications and interfaces
- Analysis of software errors and malfunctions
- Participation in the concept of system architectures
- Ensuring and developing reliable and efficient monitoring
- Continuous optimization of systems and continuous communication with other areas

Required Skills

- Study of computer science, informatics, computer engineering or comparable professional experience
- Several years of experience in software development (dealing with code, build, deployment)
- Know-how in the web server area (e.g., Apache, Tomcat)
- Experience with scripting, automation, test procedures
- Basic knowledge in the administration of Linux systems
- Knowledge in the administration of database systems
- Interest in training for Continuous Integration (CI), Continuous Delivery (CD)
- Ideally, knowledge of i.e. Jenkins, Puppet, Java, Bash, GIT, Maven, and Gradle
- Good German Language, min. Level B2
- Very good English

Company offers

Challenging and interesting tasks as well as a pleasant working environment in an open corporate culture. With a flexible working time model, training opportunities, flat hierarchies and diverse, innovative thematic fields, you will be able to create the best conditions for your career in digital life and business.
