SOFTWARE DEVELOPER-TEST AUTOMATION

The Company:

We design, create and communicate — with our heart and mind and a passion for digital media and technology. We have a solid understanding of the diverse digital market and its requirements and guide our customers on their journey to meet their targets. We use our extensive expertise in the field of internet technology to convert brand needs into real customer relationships. The secret to our success lies in combining strategic and technological skills as well as customer needs and solution strategies. After all, we are a one-stop shop for all customer's services. Only through this approach can we ensure the continual success of customer projects – even with last-minute changes to projects and requirements.

The Company seeking to enrich the growing team with a software developer that has the following.

Your Tasks

As a software developer in the field of test automation, you will program and develop scripts with a test automation framework that automates software systems and infrastructures with regard to their functionality. Furthermore, you are developing new functionalities for the test automation framework and the automation platform.

- Planning and performing automated tests for various test levels
- Creation of test automation scripts (mainly in Java)
- Implementation of test automation environments and test automation frameworks
- Development of our test automation frameworks
- Implementation of the Frameworks in the development process (Continuous Integration) in addition to the operational provision (DevOps)
- Test automation for responsive design and development of our mobile device cloud
- Development of an automated quality service lane and integration into MMS-DevOps-Framework
- Structure of quality assurance in the IoT area

Required Skills

- Completed study in the IT field, degree in computer science or a comparable study
- Experience in software development and system integration as well as in the field of test automation
- Knowledge about Build server (Jenkins, TeamCity), Build tools (Maven, Ant) and development environments (Eclipse, IntelliJ)
- Know-how of object-oriented Programming languages (ideally: Java)
- Ideally, knowledge of at least one test automation tool (e.g. selenium, webdriver, HP QTP, SikTest, Silk4J, Tosca, TFS, Visual Studio)
- Ideally, knowledge with Docker and Puppet
- Good German Language, min. Level B2
- Very good English

Company offers

Challenging and interesting tasks as well as a pleasant working environment in an open corporate culture. With a flexible working time model, training opportunities, flat hierarchies and diverse, innovative thematic fields, you will be able to create the best conditions for your career in digital life and business.
